THE SERVICES COMPANY THAT WORKS FOR YOU...

SOFTWARE ASSET MANAGEMENT

SNOW OVERVIEW

Helping organisations have full visibility of all assets.

Organisations need end-to-end visibility across their systems so they can optimise spend, maximise value and minimise risk. We can provide a hosted or on-premise solution to our Customers.

How it works?

- We provide a Hosted Platform in Azure (Shared or Private) or can implement in your own environment
- We work with you to get the Snow License Manager up and running in as little as a few days

The approach

- We hold an implementation call with you to talk you through all the stages and prerequisites
- We agree timelines and ensure we manage this from start to finish
- The agent deployment is tested, and we ensure any connectors are fully working
- We provide 12 months Technical Support to ensure you always have us on hand if you need us

This will allow organisations to:

- Have full visibility of all your assets in one place and find any blind spots
- Save you time and effort by having Snow do the normalization of all the software for you
- Understand your compliance position and look for any potential risks simply by running reports
- Be able to optimise spend by seeing detailed usage information, so you spend less time chasing data and more time thinking about optimisation and cost savings, putting you in a position of strength in renewal negotiations.

**Have a single source
of truth of your IT
assets**

**Set up alerts for
expiring agreements
and subscriptions**

**Understand how your
installations and
usage compares to
your licenses**

**Plan to mitigate risks
and optimise your
spend**

**Improved Return on
Investment**
