THE SERVICES COMPANY THAT WORKS FOR YOU...

SOFTWARE ASSET MANAGEMENT

SNOW LICENSE IMPORT OVERVIEW

Helping organisations have visibility of software licenses.

As part of our on-boarding services we ensure that Snow License Manager not only has the inventory data, but it also has licenses to start to give visibility of your compliance and usage positions.

How it works?

- We obtain your Microsoft or Adobe historical purchases records either from your own records, your reseller records or from the software vendor
- We upload your licenses and set up your agreements in Snow to enable you to see all your licenses in one place

The approach

- Scoping call to obtain an understanding of how to collate the information required
- Collaborate with you to ensure we import your licenses
- Conduct the import into Snow License Manager
- Set up Compliance reports within Snow and share with you

This will allow organisations to:

- Ensure an improved Return on Investment (ROI) of Snow License Manager to your organisation
- Have a single source of truth for your license entitlement
- Understand your compliance position with Microsoft and Adobe
- Plan to implement mitigation activity or to optimise usage and/or any potential saving opportunities

**Have a single view of
your licenses**

**Set up alerts for
expiring agreements
and subscriptions**

**Understand how your
installations and
usage compares to
your licenses**

**Plan to mitigate risks
and optimise your
licenses**

**Improved Return on
Investment**
